Atlas Manuale :

Or, A New SETT of

M A P S

Of all the Parts of the EARTH,

AS WELL

ASIA, AFRICA and AMERICA,
AS

EUROPE.

WHEREIN

GEOGRAPHY is RECTIFY'D,
By Reforming the OLD MAPS according to the
Modern Observations.

And the Coasts of all Countries are laid down,
agreeable to Mr. Edmund Halley's own Map.

Which is not done in any before extant.

This being the First whole Sett of Maps that agrees
with the Observations and Corrections that have been made by the
ASTRONOMERS and TRAVELLERS of this Age.

*The Maps are fairly Engraven on Copper ; and the Scale is
large enough to shew, not only the PROVINCES, but also
all considerable CITIES, and the TOWNS too of chiefest Note.
Mostly perform'd by HERMAN MOLL.*

L O N D O N :

Printed for *A. and J. Churchill* in Pater-Noster-Row ;
and *T. Child* in St. Paul's Church-yard. **MDCCIX.**

Atlas Alpinus:

Of a New Set of

M A P S

Of all the Parts of the Empire

as well

as the Kingdoms and Principalities

as

E U R O P E

WHEREIN

GEOGRAPHY is EXPLAINED

By Reasoning the Old Maps according to the

Modern Observations

and the Causes of all Alterations are laid down

as well as the Names of the Rivers and Mountains

Which is not done in any former edition

The Author has also added a new Map of the

Islands of the Mediterranean Sea

and a new Map of the Kingdom of France

and a new Map of the Kingdom of Spain

and a new Map of the Kingdom of Italy

and a new Map of the Kingdom of Portugal

and a new Map of the Kingdom of Sicily

and a new Map of the Kingdom of Naples

Concerning this Sett of

M A P S

A N D T H E

Correction of Longitude

By Modern Observation.

THe Art of making *MAPS* and Sea-Charts, is an Invention of such vast use to Mankind, that perhaps there is nothing for which the World is more indebted to the studious Labours of Ingenious Men. For by the help of them Geography is made plain and easie, the Mariners are directed in fetching us the Commodities of the most distant Parts, and by the help of them, we may at home, with Pleasure, survey the several Countries of the World, and be inform'd of the Situation, Distance, Provinces, Cities and remarkable Places of every Nation. To do this with Exactness, was an Art (to be sure) not easily attain'd; it was not one Man, nor one Generation of Men, that could bring it to any reasonable Perfection; and accordingly, tho' it was very Early begun, it is but now in our Days that a Method is found out, whereby Maps may be truly Corrected.

Even so early as *Anaximander* the Disciple and Successor of *Thales*, Geographick Tables, or Maps have had a Being: A plain Demonstration of the Value of this Science; since it began with the beginning of Literature. We are told *Alexander* carried *Callisthenes* with him to *Babylon*, to make a Map of his Conquests; and

and undoubtedly the *Greeks* and *Romans* had Geographical Tables of all their Countries, tho' none of 'em have been serv'd to our Days, except that which shews their Un-fulness in making them, I mean the Ancient Map of the *Roman* Empire still extant, under the Name of the *Peutingerian* Tables, from *Conr. Peutinger*, a Learned Gentleman of *Augsburg*, to whom we are beholden for the Publication of them. Those Tables contain an Itinerary of the whole Empire from *West* to *East*, with the distance of Towns by Mensuration; but then the Seas, Desarts and Forests, being not Travel'd through or Measur'd, are not set down in their true Form, the Latitude or Breadth from *North* to *South*, being not at all regarded. This to be sure must have been the general Fault, before Astronomy was made to assist Geography, which had been faintly attempted by divers, but never effected by any before *Ptolemy*.

Claudius Ptolemaeus a very Learned Astronomer, who flourished at *Alexandria* under the Reign of *Antoninus* the Philosopher, making use of all preceeding Discoveries, and joyning the Observations of *Hipparchus*, *Timocharis* and the *Babylonians*, with those of his own, formed the System of the Universe, still known by his Name; and prescrib'd the Methods of discovering Longitude and Latitude, by Observation of the fix'd Stars, and the Course of the Planets; inventing also the Meridians and Parallels, the better to direct the exact placing of Towns on the Map; and himself publish'd a Sett of Maps, which were made use of for many Ages.

But since the invention of the Mariner's Compass, and the great increase of Navigation by the help of it, we have been able to visit all those most distant Places that *Ptolemy* had but imperfect Accounts of; have especially discover'd that he was very much mistaken in his Accounts of Longitude, and that all Maps hitherto extant are vastly erroneous in the Situation of Places Eastward. The Fault in General was computing the Degrees on the Earth faster than would answer to those in the Heavens, and thereby making Places to seem farther distant from the first Meridian than they really are: Thus *France*, *Italy*, *Greece*, &c. were by little and little so extended, and the Mediterranean Sea thereby so much lengthened, that upon exact Observation it is found, at *Scanderoon*, no less than 13 Degrees were gain'd, and the Voyage thither represented as 200 Leagues longer than it is. And the farther we go Eastward, the greater is the Error, the Coasts of *India* being laid 20 Degrees too far East, and *China* 27 Degrees beyond its true Situation. This fault

fault had like to have prov'd fatal to Mr. *Dampier* and his Company: For when they stood off from the South-Sea to the *East-Indies*, they found the Voyage 500 Leagues longer than the Maps represented it, and themselves almost starv'd by trusting to 'em. But as by Astronomy, Geography was at first Corrected; so the Amendment of these Errors is owing to the great Improvement now made to that Science, and the exquisite Ingenuity and Industry of modern Astronomers; who by the assistance of excellent Telescopes and other Instruments of modern Invention, have made very considerable Discoveries in the Heavens, and thereby found out a way of ascertaining Longitude as well as Latitude at Land, and correcting the Maps to a perfect exactness.

This method is by Observation of Eclipses; whose beginning at *London* or *Paris* being exactly calculated, and thereby certainly Predicted, and the beginning of the same Eclipse being observ'd at any distant Place, the difference of Time is certainly known, and 15 Degrees being allow'd to an Hour, the distance may be fix'd to a few Miles. The Eclipses of the Sun and Moon only, were at first made use of to this purpose; but as those occur but seldom, and are visible in some certain Places only, the Observations could not be often made, and therefore this great Work would have been long a doing, if the discovery of the *Satellites* of *Jupiter* and their Eclipses had not afforded a new, and very considerable help to it; for these being four in number that make a continual Circuit round that Planet, there happens almost every day an Eclipse of one or other of them.

The *Satellites* of *Jupiter* were discover'd by *Galileo*, the Eclipses of them by *Huygens*, the Theory of them formed by the Academy of Sciences at *Paris*, and the Eclipses first calculated for a whole Year by Mr. *Flamsteed*, and together with the Method of computing Longitude thereby, communicated in the *Philosophical Transactions* of December, 1683. Since which Time an Ephemeris of them is annually calculated, and Observations for correcting Geography, are very commonly made abroad. Thus this great Work of discovering Longitude, which was thought impossible, is in a great measure perform'd; the Longitude any where on Land being certainly taken, and thereby the Coasts and Situation of Towns exactly laid down; and perhaps in Time the Art may be so improv'd as to be practicable at Sea too. At least if Ships were sent out to make these Observations, at all the Capes and Head-Lands round the Globe, the Seamen would be able to Correct their Reckonings very often in long Voyages.

This

This being premised, *viz.* That there is a way of ascertaining the Situation of places *East* and *West*, as well as *North* and *South*, and that many Observations have been made in distant Parts of the Earth, whereby the Coasts and chief Towns have been brought to their right Situation in the Map, and those being known; smaller Towns, and other Places dependent corrected by 'em: To evince that *Sanfon's*, and all the Maps formerly Publish'd were exceedingly Erroneous, and that the *Sett of Maps contained in this Book are Correct*, we shall set down a few of those many Observations that have been made, and subjoyn a Table of the Differences between those Observations and the common Maps, *viz.*

Paris by Observation is found to be 2 Degrees 25 Minutes *East* from *London*. *Brest* 4 D. 25 M. *West* from *Lond.* *Madrid* 3 D. 37 M. *West* from *Lond.* *Rome* 13 D. *East* from *Lond.* *Copenhagen* 12 D. 53 M. *Dantzick* 19 D. *Moscow* 38 D. 45 M. *Aleppo* 38 D. 45 M. [*Philos. Transact.* June 1683. Feb. 1691.] At the Cape of Good Hope *P. Tachard* made an Observat. by the *Satellites*. June 1685, and found it to be 14 D. 30 M. *East* from *Paris*. [*Voyage de Syam.*] *Aden* in *Arabia* near the Mouth of the *Red-Sea*, by Observation is found to be 47 D. 30 M. *East* from *Lond.* *Cape Comorin* by Observation is found to be 76 D. *East* from *Lond.* *Bombay* on the Western Coast of *India*, is found to be 72 D. 30 M. *East* from *London*. *Fort St. George* 80 Deg. from *London*. [*Philos Transact.* June 1683. & *Observat. Phys. & Math: Envoyes à l' Acad. de Paris.*] An Eclipse of the Moon being by Mr. *Halley's* Direction observ'd at *Ballasore* in the Bay of *Bengall*, by Mr. *Benja. Harry*, and the same Eclipse observ'd at *London* by Mr. *Halley*, at *Dantzick* by Mr. *Hevelius*, and at *Avignon* by Mr. *Gallet* the Meridional Distance between that Place and *London*, was found to be 87 D. [*Philos. Transf.* Feb. 1682.] *P. Camille* and *P. Beza*, by Observation of the *Satellites*, Sept. 29. 1689. at *Malacca* found that Place to be 99 D. 45 M. *East* from *Paris*. The West Point of *Java* is observ'd to be 140 D. *East* from *Lond.* *Syam* by Observation of an Eclipse of the Moon by *P. Tachard* 98 D. 30 M. *East* from *Paris*. *Nimpo* on the Eastern Coast of *China*, Observation by *P. Noel*. 117 D. 58 M. *East* from *Paris*. [*Obser. Phys. & Math*] The Western Coast of *America* was stretcht out too far, as Mr. *Halley's* Observations in his late Voyage make appear, *Cape Augustin* on the Coast of *Brasil*, being 35 D. *West* from *Lond.* notwithstanding the *Oxford Maps* lay it down in 25. And *Cape Frio* on the same Coast (under the Tropick) is 42 D. 30 M. *West* from *London*.

'T would

'Twould be tedious to enumerate all the Observations that have been made; these we have mention'd are at such distant Parts, that almost all our Maps may be examin'd by 'em, and shall trouble the Reader with only these two more, viz.

France in the former Maps of it had been extended several Degrees on every side, so that the Kingdom was made to seem exceedingly larger than it is, but this has been corrected by many Years labour of the Academy of Sciences at *Paris*, and a New Map correctly made, according to their Observations, was publish'd at *Paris*, from which this in our Collection is copied.

Muscovy on the other hand, had been contracted in its Southern Part near 250 Miles; for the *Palus Mæotis* was made to rise up to the 52 Deg. of Latitude, and the City of *Azoph*, is plac'd in 51 Deg. N. Lat. by *Sanfon* and the *Dutch* Maps. But since the Conquest of that Place, the *Czar* has caused an actual Survey to be made of the Country South from *Moscow*, and of the Course of the River *Don*, whereby it appears that *Azoph* lies in 47 D. and that the Course of that River is very much different from what was formerly represented, as may be seen in comparing the old Maps with that in this Book, which is Copied from that Survey.

Abundance of other gross Errors in former Maps, corrected in this Sett, might be mention'd, such as the *Head of the River Nile* laid down 15 Deg. that is, 900 Miles more South than it really is, the *Caspian-Sea*, being made of Oval Form from *East* to *West*, whereas in Truth 'tis almost an oblong Square from *North* to *South*; and many more, which to avoid tiring the Reader, we omit, and leave it to his own Observation to discover.

But to apply these Observations to our Maps, it must be remembred that the Degrees of Longitude in them are computed from the first Meridian, which was fix'd at *Teneriffe*, before the *French* remov'd it to the Island *Ferro* 2 D. 30 M. more *West*; but the Observations we here set down being deduc'd from *London*, which is 17 D. 30 M. *East* from *Teneriffe*, or 20 from *Ferro*, an Addition must be made of so many Degrees in places *Eastward*, or Subtraction proportionate for places *Westward*; and then the true Longitude of these Places as they ought to stand in the Maps will appear thus, viz.

Longitude from London by Observation.	From Teneriff.	
	D.	M.
Paris.	2.	25. East.
Madrid.	3.	37. West
Rome.	13.	— E.
Copenhagen.	12.	53. E.
Dantzick.	19.	— E.
Constantinople.	31.	30. E.
Moscow.	38.	45. E.
Aleppo.	38.	45. E.
Cape Good Hope.	16.	55. E.
Aden.	47.	30. E.
Bombay.	72.	30. E.
Cape Comorin.	76.	—
Fort St. George.	80.	—
Ballafore.	87.	—
Malacca.	102.	10.
Syam.	100.	55.
West Point of Java.	104.	—
Nimpo in China.	120.	23.
Pekim.	117.	45.
Cape Augustin in Brasil.	35.	— W.
Cape Frio.	42.	30. W.

By this Table may be seen the difference between the and the Old Maps. And thereby it appears, that *India* is, and *China* no less than 500 Leagues too far to the there so great, as to lay that City 135 Miles too far off, an Old Map seems at least 40 Miles more than it is. agree with the Observations, and consequently whether Maps. But it is necessary to Advertise, that the four Engraven according to the Old, that so by comparing may the better appear.

LONGITUDE.

cen the New Observations, which are according to the Truth, India was laid almost 400 Leagues farther off, than it really is to the East. Nay, to go no farther than Rome, the fault is far off, and the distance between Genoa and Rome, measur'd on it is. By these Tables will also be seen how these Maps whether they are not rather to be consulted than the Old e four General Maps of Europe, Asia, Africa and America, are comparing the particular Maps with them, the New Corrections

A T A B L E of the M A P S contained in this Volume.

- 43 Chili, Magellanica, the Streights and Terra del Fuogo.

A

This is a historical map of Europe, titled "THE NORTH-EAST COAST OF EUROPE". The map is oriented with North at the top. It shows the British Isles, Scandinavia, Central Europe, and the Mediterranean Sea. Major cities like London, Paris, Rome, and Constantinople are marked. The map is oriented with North at the top and includes a grid of latitude and longitude lines. The map is titled "THE NORTH-EAST COAST OF EUROPE".

longi

This is a detailed historical map of Northern Europe, Russia, and the Mediterranean region. The map is oriented with North at the top and includes a grid of latitude and longitude lines. Key geographical features and labels include:

- Regions and Countries:** FINLAND, LITHUANIA, HUNGARY, SERVIA, BULGARIA, NATOLIA, CYPRUS, and various Russian provinces like Permian, Ustinglia, and Kargopolia.
- Cities and Towns:** Stockholm, Moscow, Warsaw, Leningrad, Constantinople, and many others.
- Seas and Oceans:** THE BAL-TICK SEA, THE EUXINE SEA, and the MEDITERRANEAN SEA.
- Islands:** LAPPONIA, KOLA, and various islands in the Baltic and Mediterranean.
- Geographical Features:** Ladoga Lake, Onega Lake, and the White Sea.

The map is a high-resolution scan of a historical document, showing intricate details of the landmasses and the text labels.

A F R

This is a historical map of the Eastern Hemisphere, titled "MUNDI TABULA AC HYDROGRAPHICA TABULA". The map is oriented with North at the top. It shows the Eastern Hemisphere, including Europe, Asia, Africa, and Australia. Major regions labeled include NATOLIA, ASIA MINOR, ARABIA FELIX, REGNUM NUBIA, BELEG VAN, DAMUT, ETHIOPIA, and TALIS. Numerous cities and islands are marked, such as Constantinople, Alexandria, Mecca, Madagascara, and the East Indies. The map is framed by a grid of latitude and longitude lines.
